Chapter 1 Overview

1.1. Description

iVMS330 (Video Manage System 330, the same below) is a video management software specially designed for BitVison devices based on VMSLite. In iVMS330, users can connect the device from our server via its serial number and manage the devices on the LAN via IP address.

The main functions of iVMS330 are Live, Local playback, Remote playback, and E-map. Other functions include Device management, User management, Storage, Export List, Alarm Management, View Setup and Settings.

Live is real-time preview of the camera. You can manually take screenshots and record videos while on preview screen, switch the stream and electronically zoom in. If device supports 2-way audio, you can turn on the speaker and microphone for remote intercom. For fisheye device, you can also switch to the Fisheye Mode.

Local Playback is for viewing the video record from the device in local computer. To save the local record, you need to set it in Storage. As long as there's video record and corresponding information in the database, you can make screenshots, use electronic zoom and export video streams to other formats supported while using playback feature, regardless if the device is online or offline.

Remote Playback is for viewing the video record from the device memory. This function is similar to Local Playback, but the device must be online for Remote Playblack. You can also make screenshots, use electronic zoom and export video streams to other supported formats while using Remote Playback.

E-Map is used to customize the map. Drag the device to the corresponding spot and save it. After saving, you can get real-time preview by double-clicking the device.

1.2. Installation

The installation file of iVMS330 is a packaged exe. file. Generally, you only need to click "confirm" or "next" to complete the installation. The specific steps are as follows:

(1) Obtain the installation file of the latest released version. The installation file icon and naming scheme are shown in Figure 1-2-1.

② Double-click the file, it will pop up the dialog box "Select Setup Language" as shown in Figure 1-2-2. The default language is same as your current system. You can click the drop-down box to select another language for installation.

Ş.	Select the language to use during the installation:
	English -
	OK Cancel

Figure 1-2-2

3 After selecting the appropriate installation language, click " OK". The Welcome dialog box will be shown as Figure 1-2-3.

Figure 1-2-3

(4) Click Next, it will pop out the dialog box "Select Destination Location". The default install location is on C folder. You can modify the installation path to any other folder, as shown in Figure 1-2-4.

Completing the iVIS330 Setup Vizard

Setup has finished installing iVMS330 on your computer. The application may be launched by selecting the installed icons.

Click Finish to exit Setup.

✓ Launch iVMS330

Figure 1-2-9

Shown above is the installation process for iVMS330 on win10 system. In other versions of the system, there may be slight differences in the style of dialog box, which does not affect the use. After the installation is successful, a shortcut will be generated on the desktop (if the default check is not canceled), as shown in Figure 1-2-10.

Figure 1-2-10

1.3. Uninstallation

You can uninstall iVMS330 by following these steps.

① Open Control Panel\Programs\Programs and Features as shown in Figure 1-3-1. Find "iVMS330 Uninst" and click "uninstall".

1.4. Log in

1.4.1. First Login

After the installation is complete, you need to create a super user to open iVMS330 for the first time. The login screen opened for the first time is shown in Figure 1-4-1-1.

Figure1-4-1-1

The program will automatically enter into main interface after the super administrator user is successfully added. Next, navigate into the "Device Adding" interface. Please refer to the operation instructions for device adding.

Note: The first added user of system is the Super User. The Super User has the highest authority to operate on other users, but they can not delete related configuration information. For safety, we suggest setting a more complicated password for the Super User.

1.4.2. Normal Login

Users can be divided into Administrator and Operator based on different access. The administrator login requires an account with the corresponding authority. Double-click the iVMS330 shortcut on the desktop to open the login page. The normal login page is shown in Figure 1-4-2-1.

Figure 1-4-2-1

After entering the account password, click the "Connect" button or click the "enter" key to start the login.

Chapter 2 Main Function

Below will detailedly introduce the functions and instructions of each control in each function interface.

Warm Tips: The program will make the interface back to the one you last opened by default after logging, it may take a few seconds to restore before interface, and will stay on the main page. It will stay in the Home Page if it's opened for the first time, or if you have not clicked on other functions. The main interface of program is shown in Figure 2-1.

Figure 2-1

① The title bar includes software logo, real time, help and related, and window control buttons.

2 Menu navigation bar, open button for each function.

③ Function page, you can switch the display content by clicking the button in ②.

2.1. Live View

Click the Live Preview button on the left navigation menu to open the live preview interface. The real-time preview interface consists of several controls, as shown in Figure 2-1-1.

Figure 2-1-1

① View and camera list block expands the collapse button bar, click to collapse or expand the view, camera list.

② View and camera list block, display added devices and channels or saved views, drag a channel of the device to 5 to play live preview video, click on the view list to switch views.

- ③ Online channel.
- ④ Offline channel.
- ⑤ Play the window, drag 3 here to preview the device real-time picture.
- 6 Toolbar.

2.1.1. Device List

The Device list shows added devices. It will be detailedly introduced in the device management of subsidiary management function, device list as shown in Figure 2-1-1-1.

Figure 2-1-1-1

1 Device search box: when there are too many devices, you can quickly find the device

- by entering the device channel name.
- Device name.

③ The device channel name, which can be dragged to the Play Window to start a live preview.

- ④ Online mark.
- ⑤ Offline mark.

2.1.2. View List

The view list shows the view saved by the user. Click on the item in the View List to open that view. If the device channel was added to the View, the live preview will start simultaneously when the view is opened. The View List and Play Window are shown in Figure 2-1-2-1.

Figure 2-1-2-1

1 View search box: when there are too many views, you can quickly find the device

- by entering the view name here.
- 2 The view saved by the user.
- ③ The currently open view.
- ④ Open view effect.

2.1.3. Display Window

The playback window is shown in Figure 2-1-3-1. Under normal conditions, ① the playback channel title bar is a black background color, and ③the display window toolbar is hidden. When the play window is selected, the real play window will have a yellow border, the title bar will change to dark red, indicating that the window is the currently selected window, and some of the function buttons of the toolbar bar need to specify a window, such as a screenshot button. When the mouse is over the play window and the play window has been dragged into the device channel, the toolbar of the play window is displayed.

Figure 2-1-3-1

(1) Title bar of play window: shows the device channel name, code rate and device image status. The Triangle exclamation point indicates that the device has detected an object movement on the screen.

2 Device channel real-time picture.

③ Play window toolbar, several icons as follows: stop/start live preview, screenshots, start/close recording, turn on/off the microphone, turn on/off the speaker and more functions, like switching stream, switching Fisheye mode, and Digital zoom, as shown in Figure 2-1-3-2.

Figure 2-1-3-2

2.1.4. Toolbar

Figure 2-1-4-1

① Open/close View Polling: The Rolling View is used to automatically and repeatedly open the view which has enabled the rolling settings. The view settings will be

detailed in 3.6.

2 Play image size settings with 5 optional settings.

③ View layout settings with 9 optional default empty views.

④ The screenshot tool is used to capture the current frame of the currently selected play window, and save it as an image format.

- ⑤ Stop all play windows.
- 6 Play all windows.

⑦ PTZ control. In the security monitoring application, PTZ is shorthand for Pan/Tilt/Zoom, which represents the omnidirectional (left/right/up and down) movement of the pan/tilt and the zoom control of the lens.
⑧ Full-screen display.

2.2. Local Playback

The local playback interface layout and live preview interface layout are similar. The main difference is that the local playback toolbar has more functions, as shown in Figure 2-2-1. Among them, ① the list fold/unfold button and ② the view device list are exactly the same as the live preview interface in function and style, so we will not describe this section in detail.

Figure 2-2-1

① View, camera list block fold/unfold button bar: click to fold or unfold the view,

camera list.

② View and camera list block: display added devices and channels or saved views, drag a channel of the device to ⑤ to play live preview video. Click on the view list to switch views.

- ③ Play the window, you can drag ⑤ to preview the real-time picture of the device.④ Toolbar.
- ⑤ Online channel.
- 6 Offline channel.

2.2.1. Display Window

Play window as shown in Figure 2-2-1-1. Under normal conditions, ① the title bar of the play channel has a black background color. ③ The toolbar of the play window is hidden. When the play window is selected, a yellow border will show in the play window and the title bar will change to dark red, indicating that the window is the currently selected window. Some of the function buttons on the toolbar bar, such as the screenshot button, need to specify a window. After the play window has been pulled into the device channel, the play window toolbar will be displayed when the mouse moves over the play

window.

Figure 2-2-1-1

① Play window title bar, displays the device channel name and code rate.

- 2 Device channel recording image.
- ③ Play window toolbar. The functions of the icons are as follows: turn on/off the

independent play mode (Put the play controls into the toolbar and open the independent play mode. Some play control buttons and play control progress bars will be put into the play window, as shown in Figure. 2-2-1-2). Snapshot, open/close the speaker, switching bit stream, switching fisheye mode and digital zoom, as shown in Figure 2-1-3-2 in the previous section.

Figure 2-2-1-2

2.2.2. Toolbar

The local playback toolbar is shown in Figure 2-2-2-1.

0 CO 0 13,49		④ 1x *
	13:50 2019-01-07 13:50:51.229	

Figure 2-2-2-1

① Turn on/off the time selection mode. Turn on the time selection mode to select a time period for loop playback, or click the Export button to export the video of this time period as a normal video file.

2 Open the time selection panel and click on the other area. The time selection panel will be folded.

3 Quickly retrieve videos.

④ Play speed control bar. The default speed is 1X. Pull left to slow down, and right

to fast forward.

⁵ Progress bar, zoom control bar and the left tab shows the time represented by

the entire progress bar.

⁽⁶⁾ The progress bar. When the device channel is pulled into the play window, there will be a green thin bar if the channel has recording saved. The time axis above shows the recording time axis of the currently selected window, and the time axis below shows the union of all camera recording time axes in the current view. You can drag the time axis and the window will play the moment where the yellow

vertical line is.

- ⑦ Forward play / stop playback.
- (5) Advance to the next frame.
- 6 Play the first record
- (7) Play the previous record.
- (1) Play the next record.
- 12 Play the last record.
- (3) Play image size settings with 5 optional settings.
- (4) View layout settings, with 9 optional default empty views.
- (5) Intercept the current frame of the currently selected play window.
- (b) Export the time period select in (1).
- ① Play in full screen.

2.3. Remote Playback

The remote playback interface layout and live preview interface are similar to the local playback layout, as shown in Figure 2-3-1. ③ play window is basically the same as in local playback, except not having the independent play function. So this section will not explain in detail.

Figure 2-3-1

① View, camera list, search block list fold/unfold button and view style selection button bar, click to fold or unfold the view, camera list or change the view style.

② View, camera list block, display the added devices and channels or saved views.

You can drag the device channel to ⑤ to play real-time preview video. Click the

view list to switch the view.

- ③ Video search panel.
- ④ Display window.
- ⑤ Toolbar.

2.3.1 Video Search Panel

Remote playback searches and displays one day's recording by default. Select the type of video you want to search (normal, alarm or all), and the search date, then click the search button. If the device channel is online and has video, a green or red bar will be displayed on the timeline of the toolbar. Green represents normal recording and red represents alarm recording.

Figure 2-3-2-1

① Turn on/off the sync control mode, and turn on the sync control mode to synchronize all playback windows.

② Turn on/off the time selection mode, turn on the time selection mode to select a time period for loop playback, or click the Export button to export the video of this time period as a normal video file.

3 Play speed control bar. The default speed is 1X. Pull left to slow down and right

to fast forward.

④ Play forward.

5 Pause play. Progress bar zoom control bar. The left tab shows the time represented

by the entire progress bar.

⑥ Stop play.

- $\ensuremath{\overline{\mathcal{O}}}$ Advance to the next frame.
- 8 Play the first record.

- (9) Play the previous record.
- 10 Play the next record.
- 1 Play the last record.
- 1 Play image size settings with 5 optional settings.
- (3) Intercept the current frame of the currently selected play window.
- (1) Export the file of the selected time period in ② or the file selected from the file list.
- (15) Play in full screen.
- (16) Zoom in on the timeline.
- 1 Reduce the timeline.
- (18) The currently selected window.

(1) Recording timeline. When a device channel with saved recording is pulled into the playback window, a thick green or red bar will appear. Move the mouse over it, and a yellow vertical bar will be displayed under the cursor. Click on the area with recording to start playing the video and the yellow vertical bar will move forward as the playback progresses.

2.3.3. File List

The file list is shown in Figure 2-3-3-1. The green video is normal recording and the red is alarm recording.

Figure 2-3-3-1

- ① Channel name.
- ② The length of the video recording.
- ③ Recording start time.
- ④ Recording end time.

⑤ File check box.

2.4. E-Map Management

The electronic map editing status is shown in Figure 2-4-1, and the display status is shown in Figure 2-4-2. This section mainly introduces the editing status, how to customize a map to view and how to manage the map.

Figure 2-4-1

- 1 Toolbar.
- 2 Maps, devices, and other listings.
- ③ Map preview area.
- ④ Element attribute editing area.
- ⑤ Save settings button.
- (6) Cancel button.

Figure 2-4-2

- ① Map elements.
- 2 Node elements.

Figure 3-1-1

① Management of the added devices.

② All check box, you can click Delete button (5) after checking in batches, and then delete in batches the information of the added device..

③ Add button, click to pop up the Add Device dialog box, you can manually enter the device LAN IP or device serial number to add the device.

④ To edit the device information, you can click the item in the list of the added device with the mouse, the selected item is displayed in yellow background, and then click the edit button to pop up the device information editing dialog box.

(5) Click on the device entry or check the box for the entry and click the Delete button to delete the selected entry.

(6) For the list of device information in the LAN, you can check the check box in the first column and click Add to button (8) and enter the password to add the database.

 \bigcirc Select all check boxes, you can check the devices in the LAN in batches, and then click the Add to button \circledast to enter the password and add the database.

(8) Add to the database button, check the device in the LAN and click this button will pop up the Add Device dialog box. Filled in the network parameters of the device in the dialog box, just fill in the user name and password of the device, you can add to the database after the verification.

(9) Refresh the devices in the LAN.

3.1.1. Add Device

This dialog box can be popped up by clicking the Add button of the added device list or the Add to button of the LAN device list. The difference is that the latter will automatically populate the checked device network parameters, and only need to supplement the device username and password. Start the next step to verify the device information. The dialog box is shown in Figure 3-1-1-1.

A	dd Devices							×

				1	P2P IPC ∨			
							Next step Cancel	ו

Figure3-1-1-1

(1) Set the default username and password, the user can set several common usernames and passwords, so that there is no need to fill in the username and password of the device every time you add the device, and directly verify the next step as shown in Figure 3-1-1-2.

② Add the device area with IP: the IP, port, channel numbers and protocol will be all filled by default if enter from the list of LAN devices; you need to fill in all of these if add the device area manually.

③ The serial number adds the device area, where all information is manually added by the user.

④ Next step verification button, start to verify the added device, if there is verified device, it will become the confirmation add button, click Add to finish adding device.

(5) Cancel add a device to close the Add Device dialog box, the same function as (6).

(6) Close the Add Device dialog.

Figure 3-1-1-2

3.1.2 Edit Device

Edit the device information, first select the device to be modified, click the edit button, the edit device information dialog box will pop up, the gray edit box is not editable, the others are editable, click the OK button to save the modification. Modify the steps as shown in Figure 3-1-2-1.

3.2. User Management

User management is used to add, delete, modify, and view users. General users can only modify their own passwords. Administrators can view and modify their own and operator's information, add and delete operator users. Super administrators have all permissions. The user management page is shown in Figure 3-2-1.

- 2 username.
- ③ password.

④ Repeat the password to avoid the wrong character, Submitted successfully if it is consistent with ③.

(5) Live permission, if cancelled, the user cannot enter the live preview page.

(6) Local playback and remote playback permissions, if unchecked, the user can not enter these two pages.

⑦ View management permission. If canceled, the user cannot enter the view management page.

B All Check box in All cameras option, you can select all or cancel all , such as

(9) and you can select other devices.

(9) Device channel level permissions.

3.3. Storage

The storage is used to develop a storage plan for the channel level. Users can set a storage plan for the channel of each device. (The device added with the serial number does not support the storage plan temporarily, the back-end device is the NVR, and the XVR device does not support motion detection.) The setted plan will be only be saved to the local computer; it will not affect the original settings of the device. It will be stored in the C drive by default. If necessary, you can re-select the save path to other drive letters. The storage plan interface is shown in Figure 3-3-1.

3.5. Alarm Management

Alarm management is used to view IPC alarm information. At present, only IPC devices support the alarm function, mainly to detect the movement of objects, when the camera detects that there is an object moving, it sends out an alarm to the beginning of the action, and when the action ends, it also gives an alarm, you can select ⁽²⁾ to Stop refreshing the alarm information. The alarm page is shown in Figure 3-5-1.

3.6. View Setup

View management is used to customize the edit view. Users can select the appropriate image scale and view style to add the device channel to the view, so you can switch to this view through the view list during live preview or local playback to play the channels you want, instead of being dragged in one by one, can be dragged into the device channel, and can also be dragged into the URL, image and Carouseled device. If the Carousel function is enabled in the view, the Carousel can be turned on in the real-time preview interface, and cycle switch between these views with Carousel function enabled. More content in this section and it will be described graphically.

Click the button \bigcirc to select the desired view layout type, as shown in Figure 3-6-1.
